Continuation of 11. does NOT place the application in condition for allowance because: Adding the limitation "seller" in claims 2, 6, 14, 18, 24 and 28 require further consideration and/or search. Thus, the amendment filed on 2/4/2009 is not entered.

Applicant's argued that Boyden does not teach "generating a listing, comrising listing identification data from a seller; receiving listing identification data from a seller, the listing identification data capable of being used to identify a good or service;

searching a database of listing data using the listing identification data to locate a plurality of similar listings posted within a network-based commerce system; receiving an indication from the seller selecting a selected listing from the plurality of similar listings;

generating a proposed listing to present to the seller, the proposed listing including listing data from the selected similar listing;

allowing the seller to modify the listing data of the proposed listing to create a listing; and posting the listing in a database of the network-based commerce system, the listing, once posted, representing an offering of the good or service for sale.

Examiner respectfully disagrees.

As to claim 1, Boyden teaches a method of generating a listing in a network-based commerce system (generating data in fields 218-220 in a network based commerce system, page 4, col. Right, lines 17-23; page 3, paragraph [0024], lines 4-10), the method including: "receiving listing identification data from a seller, the listing identification data capable of being used to identify a good or a service" as the input section 202 can include a search tool 204 having an input fields 205 and a button 206 to search for vehicles in the list 201 by Vehicle Identification Number (VIN). Fig 2B shows an example of a vehicle work sheet page 200b to modify data for a vehicle that was already on the list 201 of the work list page 200a. The vehicle data includes 213 and 214. The above information shows that to display the vehicle data as shown in fig. 2B, the system receives VIN from a user and retrieves the a specific vehicle based on the inputted VIN by the user (fig. 2A, page 4, col. Left, lines 2-7; page 4, paragraph [0032], lines 1-9, paragraph 0013);

"searching a database of reference listing data using the listing identification data to locate a plurality of similar listings posted within a network-based commerce system" as the input section 202 can include a search tool 204 having an input fields 205 and a button 206 to search for vehicles in the list 201 by Vehicle Identification Number (VIN). Fig 2G shows various seller report pages 200g-200j that are generated by the server and sent to the seller system. The above information shows that system searches the list 201 as a database of reference listing data to display or locate the seller report pages on an interface for viewing. The report includes items about vehicles. The items are not similar listings (figs. 2A & 2B, page 4, col. Left, lines 2-7; page 4, paragraph [0032], lines 1-9, paragraph [0036], lines 1-3); "generating a proposed listing to present to the seller, the proposed listing including listing data from the selected similar listing" as displaying a page includes data 213 and 214. The page is represented as a proposed listing. The proposed listing does not include the similar listing (fig. 2B, page 4, paragraph [0032], lines 1-3, paragraph 0013);

" allowing the seller to modify the listing data of the proposed listing to create a list" as prior to posting or sending the data entered in fields 218-220 to a database in the auction server system, the system allows the user to edit the vehicle data of the page 200b in fig. 2B by clicking on either links such as 1. Modify vehicle configuration, 2. Modify condition report, 3. Update mileage & pricing (figs. 2B & 2C, page 4, paragraph [0032], lines 1-21, col. Right, lines 17-23, paragraph 0013);

resulting in the listing as after the user to edit vehicle data and click on update icon, the system indicates Mileage & pricing of the vehicle data are updated (fig. 2C page 4, paragraph [0033], lines 1-10);

"posting the listing in a database of the network-based commerce system" as sending the data entered in the fields 218-220 to a data-record for the vehicle in the auction server system. More specifically, the seller system sends the data entered in the fields to a database in the auction server (page 4, col. Right, lines 17-23):

"wherein the listing, once posted" as the seller sends the data entered in the fields to a data-record for the vehicle in the auction server system. Then the auction server system provides a report 300e to a buyer system. The report 300e includes data about the vehicle from the data-record in the auction server database (abstract, fig. 3E, page 4, col. Right, lines 17-23; page 6, col. Left, lines 1-10);
"receiving an indication from the seller selecting a selected listing" as by selecting the link for the 1999 saab 9-5SE shown in the list 305.

"receiving an indication from the seller selecting a selected listing" as by selecting the link for the 1999 saab 9-5SE shown in the list 305, the buyer system send a request to the auction server system to display the detail page 300c;

" the proposed listing including listing data" as displaying data including the link on page 300c (paragraph 0043).

Boyden does not explicitly teach the claimed limitation "a plurality of similar listings; from the plurality of similar listin

Raines teaches displaying a plurality of similar cars and representing an offering of car for sale (figs. 6, 12, 15; col. 7, lines 50-67). It would have been obvious to a person of an ordinary skill in the art at the time the invention was made to apply Raines's teaching of displaying a plurality of similar cars and representing an offering of car for sale to Boyden's system in order to allow a user select a particular similar item listing so that the service can retrieve another similar item lists based on the selected similar list and further to predict the interests of users based on the user's indication so that the system provide a recommendation of similar items based on the interests of users recited in Applicants' claims. As discussed above, the combination of Boyden and Raines support aprimafacie case of obviousness and teach claimed invention..
